Perfect TOUCH PRESS PAD

To address the problems of shine, moiré and impressions, Qualitex continues to offer the *Perfect TOUCH* Pad. With its heavy duty Nomex[®] cover, the *Perfect TOUCH* Press Pad provides the high level of performance, durability, longevity and finishing results synonymous with our *Sun Glow*[®] Press Pad and the entire line of Qualitex products. Please Add 20% to the List Price of the comparable Sun Glow Press Pad Model.

Qualitex® Sun Glow® PRESS PADS

FEATURES OF THE QUALITEX PRESS PADS:

1. Unsurpassed performance, durability and finishing results.
2. Quick Installation with predrilled holes in the covers for proper positioning of the included springs.
3. Metal Rods sewn in hem of cover for tight, scallop-free installation.
4. *Sun Glow*® cover can be washed without removal from press.
5. *Perfect Touch* Pad virtually eliminates shine, moiré and impressions on troublesome fabrics. *Add 20% to the *Sun Glow*® Pad Suggested List Price.

HI-TEMP (NOMEX®) HEAD COVERS

Heat resistant covers designed for use directly over conventional grid plates.

**Choose between WHITE SKIRTED HEAD COVERS or
HEAVY DUTY UNSKIRTED GOLDGLOW HEAD COVERS
(Rods & Springs Included with Both Styles)**

Qualitex Head Covers:

- Prevent transfer of grid plate nick spots onto garments
- Eliminate lifting of garments
- Reduce shine and moiré
- Protect buttons from heated metal plate
- Eliminate “nickel” or steam spots

IMPORTANT: To ensure correct fit, advise manufacturer and model of press. Specify type of cover desired.

Qualitex® *Sun Glow*® NOMEX® GRID PLATES

- ◇ **Exclusive *Sun Glow*® Cover made of Heat Resistant Nomex® and Kevlar**
- ◇ **Perforated aluminum base plate**
- ◇ **Scientifically designed metal diffuser**
- ◇ **Designed and Made Specifically to Fit Individual Heads.**
- ◇ **The ideal head plate pad - for best finishing results use with the Qualitex *Sun Glow*® press pads.**

1. Exclusive *Sun Glow*® Nomex® and Kevlar fabric reduces moisture.
2. Scientifically designed metal diffuser minimizes moisture retention and evenly distributes steam.
3. Provides unsurpassed durability.
4. Eliminates lifting of garment.
5. Protects against button damage.
6. Reduces occurrence of shine and moiré (wavy lines).
7. Steam or "nickel" spots are eliminated.
8. Protects against double seam impressions.
9. Heavy Duty springs included.

TO ORDER: IF THE MODEL IS NOT LISTED IN OUR CATALOG, PLEASE ADVISE MANUFACTURER & MODEL NUMBER OF PRESS AND WE WILL DO OUR BEST TO ACCOMODATE.

If model is unknown, submit an accurate pattern of the grid plate or head MARKED AS SUCH.

When ordering less than a dozen of a size (except *Sun Glow*® and Hi-Temp Nomex® covers)

- ADD 20% TO PRICE and divide by 10.

Oversized covers for use on presses using rubber pads and other extra thick padding can be furnished at 25% additional.

When ordering, specify "O-size." Any size not listed can be made. Advise manufacturer and model. If unknown submit bare board/buck template (and advise thickness of board) and we will do our best to accomodate. Prices are proportionate.

LINT BAGS & PRE-FILTRATION BAGS

LINT BAGS

NOTE: Some Cleaning Machines have a pre-filter cartridge system built into the unit. These types of machines will require two different size bags for the same machine. Please specify when ordering a lint bag if it is for pre-filter cartridge unit (mesh type small bag), or the regular lint trap bag.

HELPFUL HINTS FOR IMPROVED FINISHING & COMPLETE CUSTOMER SATISFACTION

Sun Glow® & Perfect Touch PRESS PAD **INSTALLATION INSTRUCTIONS**

1. Turn Pad over and SMOOTH out from bottom side.
2. Insert Spring Hooks through openings in hem over rod along BACK Side of Press Pad.
3. EVENLY CENTER PAD on Buck and LOCK HEAD.
4. Activate BOTTOM Steam through Press Pad twice. DO NOT RELEASE HEAD.
5. Draw up CORDS TIGHTLY.
6. Insert Spring Hooks through opening in hem over rod along FRONT Side of Press Pad.
7. Activate Bottom Steam through Press Pad — TIGHTEN DRAW CORD — Release HEAD.

*AFTER PAD IS IN SERVICE FOR SEVERAL DAYS TIGHTEN DRAW CORDS AGAIN.

Sun Glow® & Perfect Touch PRESS PAD INSTALLATION INSTRUCTIONS - The above is printed on the spring envelope enclosed with every *Sun Glow®* and *Perfect Touch* Pad. **IMPORTANT:** Proper installation eliminates dimples on pads and leave-off marks on garments while increasing useful life of pads by 10%.

STEAM GAUGE PRESSURE - P.S.I. Gauge Steam Pressure should read between **65-70 lbs.**

REDUCING VALVES - Dry Cleaners offering Laundry Services must have reducing valves leading to dry-cleaning department.

STEAM VALVE MALFUNCTIONS - Leaky valves cause excessive water accumulation which will produce "Dead Zones" in pads. Neither steam nor vacuum can penetrate these areas causing poor finishing.

PROPER PRESS HEAD ALIGNMENT - Out of line heads cause pads to shift, damage press pads, and leave double impressions on garments.

GRID PLATES - Metal or Fabric Grid Plates should be replaced when metal grid is deformed or fabric grid is torn. Periodically clean grid plates to remove fibers and resin build-ups that accumulate and then transfer onto garments leaving impressions.

HI-TEMP (NOMEX®) HEAD COVERS - Installation over metal grid plates will reduce shine; installation over fabric grids will prolong life of the fabric grid plate.

HEAD PRESSURE - MAXIMUM HEAD PRESSURE for all garments will cause impressions, double creases, and reduce the life of the pad. Reduce head pressure for heavier weight garments. Increase pressure for lighter weight garments.

IDLE PRESSES - Press pads on idle presses, in effect, bake all day and become hard and brittle. To avoid this problem, close steam valves or assign personnel to activate steam and vacuum periodically during the day.

PRESS PADS WITH SOILED COVERS - QUALITEX® *Sun Glow®* COVERS can be easily cleaned on the press. Before closing, operators should use a soft bristle brush and sparingly apply a mild solution of soap and warm water to soiled area. Activate steam through the pad. DO NOT USE VACUUM. If still soiled, repeat procedure. Allow the pad to dry overnight.

SOLUTIONS TO SHINE, MOIRÉ & IMPRESSIONS

Garment manufacturers have increasingly been using natural and man-made fibers that cause shine, moiré and impressions in the finishing process. This has become more evident in the past several years, particularly with the increasing popularity of garments made with microfibers, rayon, polyester and blends. These fabrics will show shine and impressions with too much pressure during pressing. The moiré effect is caused by some, but not all, of the yarns shrinking unevenly. Shine is produced by flattening of the weave, which in turn alters the light reflection. It is more evident on darker colors. Qualitex offers the following solutions to these troublesome issues.

Perfect TOUCH PRESS PAD: First introduced as the *Sun Glow*® Nomex® Pad and Cover as a solution to shine, moiré and impressions, the *Perfect TOUCH* Press Pad is constructed with a Nomex® heat resistant cover that allows the fibers of troublesome fabrics to release more easily which, in turn, virtually eliminates uneven shrinkage of yarns and flattening of fabric weaves. The *Perfect TOUCH* Press Pad can provide trouble free finishing, and can increase productivity by virtually eliminating the need for touch ups. As a member of the Qualitex line of Press Pads, the *Perfect TOUCH* Press Pad is constructed with the same high quality components, and will perform to the same high standards, as our *Sun Glow*® Press Pad.

TIPS FOR USE WITH *Sun Glow*® PAD: If your customer prefers to continue using the *Sun Glow*® Press Pad, we suggest the following to assist them in addressing these issues:

1. When working with these fabrics, be sure all seams are placed on the edge of the press and release the head immediately upon applying vacuum. Holding the head in contact and vacuuming at the same time for several seconds will cause these unsightly impressions and shine.
2. Press pads should be in good condition. If pads do not have good resiliency, you will certainly have shine and seam impressions. Gabardine should be thoroughly moistened with buck steam and areas smoothed out. Then apply LIGHT head pressure. Do not use vacuum with the head down. This will contribute to shine and seam impressions. If unwanted seam impressions do show up, these can usually be removed by taking the area back to the spotting board and steaming the area thoroughly with the steam gun and then hanging it aside to air dry. Sometimes a light mist of water and brushing very softly with a soft bristled brush is effective on shine and seam impressions.
3. Streaks and swales in silk, rayon and acetate can also be caused by the following:
 - (a) In the cleaning cycle: by dirty solvent, improper detergent concentration and poor classification.
 - (b) In the drying cycle: overloaded or under-loaded tumblers, condensation in the cylinder, a tumbler spinning too fast, or improper classification for drying:
 - (i) In an overloaded tumbler, a portion of a garment still wet with solvent can come in contact with the dry portion. The nonvolatile residue (NVR) in the solvent is transferred to the dry portion giving that area a swale.
 - (ii) Uneven drying can occur with poor airflow through the reclaimer and solvent condensation occurs in the wheel. Dry portions of garments come in contact with the condensed solvent causing swale.
 - (iii) Reclaimer speed adjusted too high may cause garments to cling to the cylinder edge instead of tumbling freely.
 - (iv) Lighter weight garments dry quickly and when in contact with heavier garments that are still damp, solvent and NVR may be transferred to the dry garment resulting in a swale
